Gail:

Thanks for your permission. Much appreciated. I've followed up on the graph from Kopits' blog and the L Cowles photo.

Cheers,

Matt

You have my permission to use the Our Finite World graphs, without charge.

The second image in the post by Steve Kopits on Platts Blog looks to me like it could be a chart from a copyrighted source. The chart itself says Bloomberg via Astenbeck Capital Management. Steve Kopits <[steven.kopits@gmail.com](mailto:steven.kopits@gmail.com)> would know if it is one he made. But Platts presumably is the one who now has the copyright on it, so my comments may be irrelevant. Steve would know his contacts at Platts Blog, who could perhaps shed some light on permissions.

The Old Cars of Cuba photo is from L Cowles Photography, on this page <http://lcowlesphotography.wordpress.com/2011/02/13/old-cars-of-cuba/> This is his website. <http://lcowlesphotography.wix.com/l-cowles-photography>

Figure 1 , Ask AAAS (Go to their site for Science)  
Oil drum -- no problem  
Our finite world : contact Gail Tverberg (cc'd )

Otherwise you are on your own --- generally no one cares.  
All federal photos you can use.

Charlie

**Subject:** <Beyond GDP> Permissions to use copyrighted material?

David:

We're nearing completion of the next draft. At present, we are including several copyrighted images for which we need to obtain permission. Charlie pointed us to this page:

<http://www.springer.com/gp/rights-permissions/obtaining-permissions/882>

but that only covers permissions to use Springer material. We have 6 images that require permissions, and none of the copyrights are owned by Springer.

What is the procedure for obtaining permission to use these images in our book? Will Springer obtain permission? Or do the authors need to do it? If so, how?

FYI, the images are:

1) Figure 1c from Cutler J Cleveland, Robert Costanza, and Charles A S Hall. Energy and the US Economy: a Biophysical Perspective. Science, 225(31 August):890–897, 1984.

2) The graph at <http://www.theoildrum.com/node/8162>. (This one is a “maybe”. I think we could re-generate this from raw data, if needed, but doing so would take time.)

3) Figure 3 at <http://ourfiniteworld.com/2013/10/02/our-oil-problems-are-not-over/>

4) Figure 2 at <http://ourfiniteworld.com/2013/10/02/our-oil-problems-are-not-over/>

5) The second graph at <http://blogs.platts.com/2014/07/30/peak-oil-forecasts/>

6) This photograph: [http://lcowlesphotography.files.wordpress.com/2011/02/old-cars-of-cuba-dsc\\_4474-1024.jpg](http://lcowlesphotography.files.wordpress.com/2011/02/old-cars-of-cuba-dsc_4474-1024.jpg)

Please let us know how to proceed.

Cheers,

Matt
